Education

University of Illinois Chicago (UIC) Chicago, IL
Bachelor of Science in Computer Science *Aug. 2025 – Present*

- GPA: 3.75 | Dean's List: Fall 2025, Spring 2026
- Relevant Coursework: Data Structures, Programming Practicum, Software Design, Programming Language Design and Implementation

College of Lake County (CLC) Grayslake, IL
Aug. 2023 – May 2025

Technical Skills

Languages: C, C++, Java, Python, JavaScript (ES6+), SQL, HTML, CSS
Frameworks: React, Next.js, Vite, Tailwind
Developer Tools: Git/GitHub, AWS, Vercel, IntelliJ, VSCode
Certifications: AWS Certified Cloud Practitioner

Projects

Personal Portfolio Website | *React, Vite, React Router, CSS, AWS S3/CloudFront* Sep. 2026 – Present

- Built a single-page portfolio site in React with Vite, using React Router for client-side routing across home, about, projects, and resume views without full page reloads
- Designed and implemented a custom animated navigation component driven by React state, using CSS transitions and transforms for hardware-accelerated open/close behavior
- Deploying as a static site to AWS S3 with CloudFront distribution, configuring cache invalidation and SPA route rewrites for direct-URL access

IBD Ingredient Scanner | *Python, AWS Lambda, DynamoDB, REST APIs* Aug. 2026 – Present

- Building a barcode-driven tool that scores packaged foods against known inflammatory bowel disease dietary triggers, integrating the Open Food Facts REST API
- Designed a configurable JSON rules engine with tiered matching across structured additive tags, parsed ingredient taxonomies, and raw label text to handle inconsistent third-party data
- Implemented recursive parsing of nested ingredient trees and graceful degradation for incomplete records, distinguishing absent data from confirmed negatives
- Deploying as a serverless API using AWS Lambda and API Gateway with DynamoDB caching to reduce upstream API load

Checkers App | *JavaFX, Java, Client-Server Architecture* Apr. 2026

- Designed a client-server architecture in Java using sockets to support multiple simultaneous games, with server-side thread management per game session
- Implemented game state synchronization between client and server, ensuring consistent board state and turn validation across the network
- Applied object-oriented design to model game logic including forced captures, king promotion, and multi-jump sequences with real-time move validation

Weather App | *JavaFX, Java, REST APIs* Mar. 2026

- Consumed the National Weather Service REST API via HTTP requests, parsing JSON responses using Jackson Databind to populate real-time forecast data
- Extended the base API client to support hourly forecast endpoints, configuring deserialization to handle differing JSON schemas without crashes
- Managed application state across multiple JavaFX scenes, implementing scene graph transitions and data binding to keep UI in sync with live data

Experience

Sales Floor Associate April 2023 – Present
Walmart *Antioch, IL*

- Assisted customers with questions, ensuring a positive experience and resolving issues efficiently
- Flexed across multiple departments, managing long-term tasks independently with minimal supervision
- Led small teams to complete key tasks, ensuring efficiency and adherence to company standards
